

Training Chat GPT

This is an outline explained by Dan Martell on YouTube. I recommend you check him out.

Role: Tell AI who to think like - expert, personality, professional, etc

Context: Provide details of your situation

Command: What do you want? Be specific.

Format: How do you want it to look?

Keep refining and once you have the result you want.....

Command: Write me the System Prompt to recreate this.

Now you can create a Master Prompt.

Master Prompt:

- Role
- Preferences
- Situation
- Context

Command: Ask me all the questions you need to create a Master Prompt to be able to repeat this process.

Use those questions to create the Master Prompt and use it as a framework to be able to achieve the optimum desired results consistently and reliably.

Download as a PDF and upload every time you work with Chat GPT.
